MUKAYA RAIL

Train Reservation System

A Summer Internship Report | CS3711

STUDENT NAME
K. Yuvasri

REGISTRATION NUMBER
810023104309

PROGRAMME
B.E. Computer Science and Engineering (CSE)

INSTITUTION
University College of Engineering (BIT Campus),

Anna University, Tiruchirappalli – 620 024

ACADEMIC YEAR
2026–2027

Introduction to Mukaya Rail

Mukaya Rail is a passenger-facing mobile application concept designed to make the train-ticket booking journey clear, consistent and easy to follow.

- **Project type:** UI/UX design case study and interactive prototype.
- **Internship:** Media Wave Technologies, Tiruchirappalli.
- **Duration:** 15 June 2026 – 15 July 2026.
- **Design tool:** Figma for wireframes, interface design and prototyping.

Design intent

“Book your journey easily”

The project focuses on the passenger experience—not a live railway booking backend.

Problem Statement & Existing System

Usability issues identified

- Registration may be required before users can explore booking.
- Long forms can reject small formatting mistakes.
- Fare, fees and cancellation charges may appear late in the journey.
- Users may be uncertain about payment status and refund details.

Design response

- Offer a guest route as well as sign-in.
- Use clearer fields and helpful validation messages.
- Show an order summary before payment confirmation.
- Make booking status and cancellation/refund information visible.

Note: These are usability observations from the report, not measured industry-wide statistics.

Project Objectives & Scope

Objectives

- Study existing train-booking apps and user needs.
- Plan user flows and information architecture.
- Create low-fidelity wireframes and reusable design components.
- Design a consistent mobile interface in Figma.
- Build and review an interactive prototype.

Scope

- Welcome and guest/sign-in choice.
- Login and sign-up screens.
- Train search and train selection.
- Passenger details, order summary and payment confirmation.
- Booking success and optional ticket cancellation.

UI/UX DESIGN ONLY

NO LIVE BACKEND

Proposed Design & Key Features

A guided booking flow with consistent components, clear actions and visible progress.

01	**Guest or account**	Start booking without mandatory sign-up; login and sign-up remain available.
02	**Train discovery**	Search trains and inspect train details before selecting.
03	**Passenger details**	Enter passenger information with clear input guidance.
04	**Transparent summary**	Review fare and cancellation charges before confirming.
05	**Status feedback**	Show payment-success state and a ticket-cancellation path.

Technologies & Design Tools

The report identifies design and documentation tools; it does not describe a coded or deployed application stack.

FIGMA

Figma

Primary tool for wireframes, UI screens, reusable components, auto layout and interactive prototype.

GOOGL

Google Fonts / system fonts

Typography choices supporting consistency and readability.

ICON

Icon sets

Consistent iconography across the designed screens.

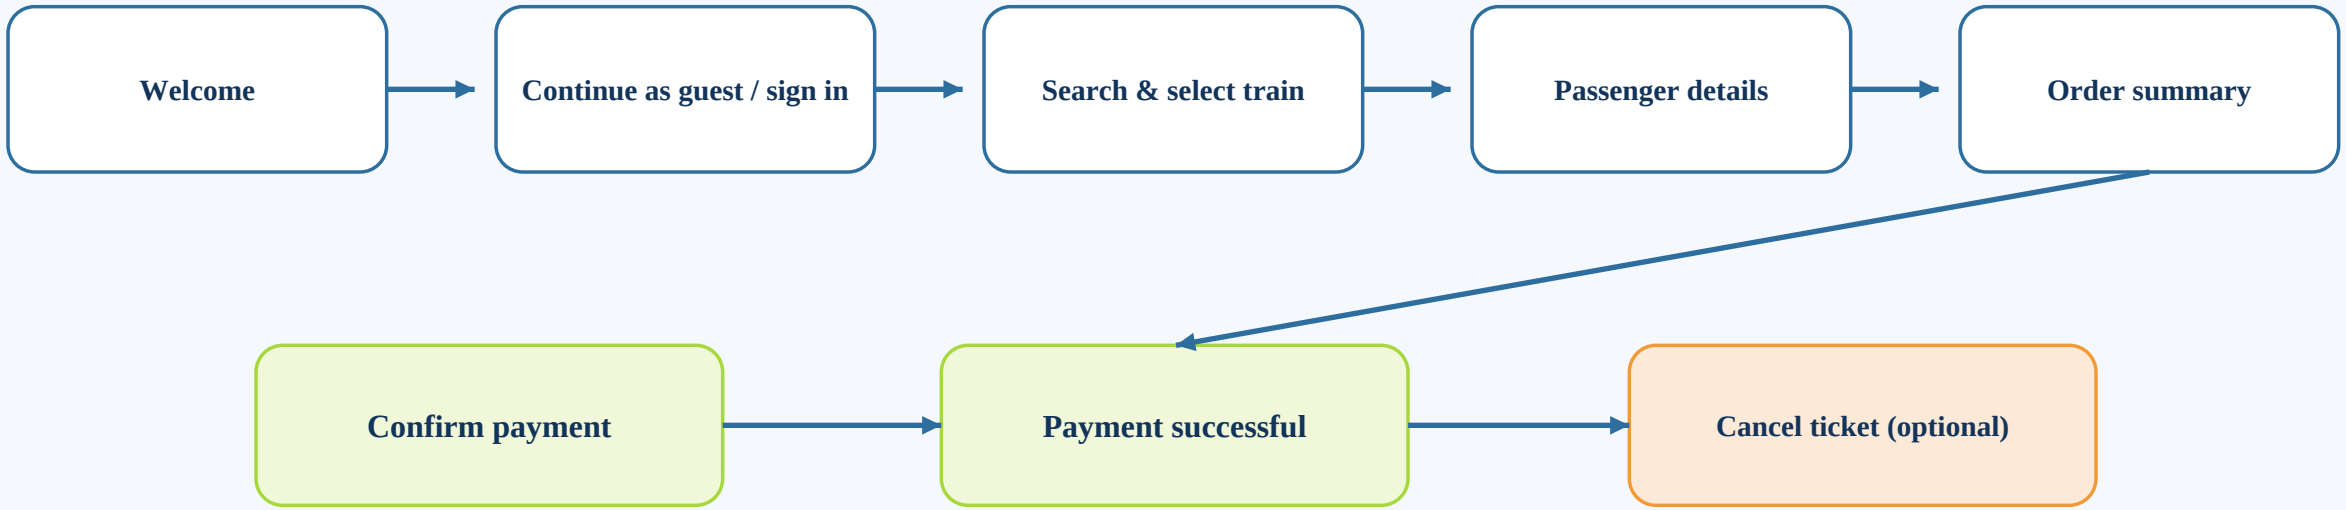
PNG /

PNG / PDF export

Sharing final screens for review and project documentation.

System Architecture & Information Structure

This project is a UI/UX prototype. The diagram represents the designed screen flow, not a backend architecture or implemented database.



Database design: Not implemented / not specified in the report

Implementation & Workflow

WEEK 1

Research

Study existing apps; list user needs and screens.

WEEK 2

Structure

Plan information architecture and create wireframes.

WEEK 3

Visual design

Create colour palette, typography and reusable components.

WEEK 4

Prototype & review

Link screens in Figma, review navigation and refine spacing/labels.

The completed prototype contains 11 screens, from Welcome through Cancel Ticket.

Results, Conclusion & Future Scope

Reported review outcomes

- Navigation across the prototype screens was checked.
- Guest/sign-in, train search, passenger details and payment flows were reviewed.
- Visual consistency, readability, spacing and button alignment were checked.
- Small refinements were made after mentor/team feedback.

Future enhancements

- Visual seat and berth selection.
- Live train status and PNR tracking.
- Saved passenger lists and alternative train suggestions.
- More payment options, dark mode and regional languages.
- Develop the designed screens into a working mobile app.

Conclusion: Mukaya Rail demonstrates a clear, user-centred booking experience through UI/UX design.
